

Aria Diamond - Full Stack Software Developer

New York, NY - <https://github.com/ariadiamond>

PROFILE

Full stack developer competent in building production grade client facing features. Passionate about intuitive and cohesive UI, automated testing for early regression, and clean, maintainable code.

Professional Skills

- Strong time management skills, with a 97% sprint completion rate (for June 2023-June 2024, not including assisting teammates or pulling up additional tickets).
- Takes initiative, fixing and integrating tests into a CI framework, setting up utilities like MSW to ease test creation, creating a culture of writing test code.
- Able to multitask, handling additional responsibilities such as code reviews, mentorship, technical interview creation and administration for 5 candidates.

Technical skills

- Extensive knowledge of frontend design and development: mocking designs in Sketch, implementing using React, Redux, and SCSS, and data fetching via APIs.
- Able to design complete features, starting from a high level, deciding whether existing APIs are reusable and if modifications are necessary, or if a new API is necessary. From there, can build a frontend integrating with existing systems (such as global state managers) and libraries to build clean and concise code.
- Strong SQL experience in writing queries and data transformations.

EXPERIENCE

Software Engineer, ListenFirst Media — March 2022—Present

- Full stack developer for an analytics company aggregating data from multiple sources.
- Lead in frontend UI development, providing input on patterns and libraries to be integrated with the existing codebase, mentor to 3 junior developers via code reviews, answering questions, and supporting them in larger discussions with stakeholders around ambiguities.
- Greatly expanded test coverage, with 86% of code coverage on the current project, integrating support with libraries such as Jest, testing-library, and MSW to further ease test writing.
- Wrote code for both frontend, integrating with backends, new UIs, and state management, and backend, deduplicating code across models with common functionality, writing new APIs, and adding new functionality to existing ones.

Grader, UCSC — October 2020-June 2021

- Evaluated 200 student's assignments of algorithms and related proofs, SQL code, and computational models for correctness and gave detailed feedback on mistakes.

Group Tutor, UCSC — January 2020-April 2020, March 2021-June 2021

- Explained technical concepts about compilers and distributed systems to students using multiple mediums.
- Helped debug code written by students in various languages and frameworks, such as Go, Python's Django, Haskell, and Node's Express.

EDUCATION

University of California, Santa Cruz — Computer Science B.S., 2018-2021, 3.9 GPA

Graduated Magna Cum Laude and Highest Honors in the major

Relevant Coursework: Database Systems, Distributed Systems, Software Engineering, Functional Programming, Analysis of Algorithms, Data Structures

New York University, New York, New York — 2021, 4.0 GPA

Relevant Coursework: Data Visualization, Cryptography
