

Aria Diamond

PROFILE

Detail oriented developer creating predictable and observable software. I aim to build fast yet maintainable code through single sources of truth, development build debugging features, and minimal APIs to reduce complexity.

EXPERIENCE

Software Engineer II – [ListenFirst Media](#), New York, NY

March 2022 - Present

- Head of frontend, leading the design and implementation of customer visible feature work in React and Typescript. Mentored new developers in best practices and current codebase quirks.
- Tackled rewrites of complex jQuery code running in production. Resulted in a 50% reduction in LoC on the feature while also making routine maintenance much faster.
- Increased performance by optimizing build tooling (decreasing [Rollup](#) build time by 110 seconds (~44%)) and introducing lazy loading (decreasing [Webpack](#) bundle size by 3MB (30%)).
- Ensured stability by leading an initiative to unit test all new and existing code using [Jest](#). At this time, we have reached 53% of lines covered by tests (up from 0%!) and added code coverage comments on Pull Requests using [Github Actions](#) to encourage further improvement.
- Created multiple self-service features (from [Database](#) to [API](#) to [frontend](#)) that decreased support tickets by up to 75%.

Group Tutor – University of California, Santa Cruz

January 2021 - June 2021

- Explained applying concepts like [causal consistency](#) to create programs to implement the concepts.
- Understood code written by other students to explain bugs and fixes required.
- Essentially performed mentorship on a code and [narrow conceptual level](#), working with students to guide them to solutions.

Grader – University of California, Santa Cruz

October 2020 - June 2021

- Evaluated [code](#) and [core CS concepts](#) for correctness and provided detailed feedback on errors.
- Essentially [performed code reviews](#) over the same problem for hundreds of students; understanding different ways of solving the problem, and pitfalls with various solutions.

SKILLS

- Daily use with React, CSS, psql, Ruby, Rails, bash, ReST APIs

EDUCATION

Computer Science (BS) – University of California, Santa Cruz

Fall 2018 - Spring 2021

- Graduated Magna Cum Laude with a 3.90 / 4 GPA.
- Completed advanced system coursework including [database design](#) and [distributed systems](#).

Cybersecurity – [NYU Tandon School of Engineering](#)

Summer 2021 - Fall 2021

- Coursework understanding the current security landscape and the cutting edge of cryptography.
